INTRODUCTION TO PAAS & SALESFORCE

Platform as a Service is a cloud computing model that provides developers with a complete environment to build, test, deploy and manage applications without worrying about underlying infrastructure such as servers, storage, networking or OS.

Key Observations :-
- The cloud provider manages hardware, OS, middleware, runtime & scaling.
- Faster development & reduced operational
- Automatic updates, scalability & security

Benefits :-
- No need to install or maintain servers
- Faster application development
- Built-in scalability & high availability
- Reduced cost & complexity
- Easy collaboration for development teams

Examples :-
- Salesforce :- CRM focused PaaS
- AWS Elastic Beanstalk :- Deploys and scales web apps automatically
- Google App Engine :- Fully managed platform for building scalable apps

INTRODUCTION TO SALESFORCE

Salesforce is a cloud based Customer Relationship Management (CRM) platform that also functions as a PaaS. It allows organizations to manage customer data, sales, marketing, service, and custom applications on a single cloud platform.

Salesforce as a PaaS Platform

- Create custom objects & data models
- Write backend logic using Apex
- Design UI using lightning Components
- Deploy applications without managing infrastructure

Trailhead.

It is Salesforce's free online learning platform that provides guided modules, projects and hands on challenges.

- Beginner - friendly & Self paced
- Provides hands on practice using real Salesforce environments
- Tracks learning progress with badges & points
- Used by developers, admins & business users

Building App with Salesforce lightning.

· Modern Component based framework to build responsive & interactive applications.

- Supports drag and drop app building
- Works seamlessly on desktop & mobile
- Integrates frontend (lightning) with backend (Apex
